**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhou et al (US 6690846) in view of Glance (US 6292298).

Re clms 1-18: Zhou et al discloses a Michelson interferometer architecture (Fig 2) and method comprising: using an input port to which an input optical beam is coupled (Zhou et al 12), using a transmission output port from which a first output optical beam is couple (Zhou et al 22), using a reflection output port from which a second output optical beam is coupled (Zhou et al 4); and using two resonate cavities (30a, 30b). However Zhou does not describe using the internal details of the resonate cavities. Glance discloses using the details of a multi-reflection resonance cavity being operative to cause multiple reflections therein of an input beam and produce therefrom multiple order beams that define the composition of an input optical beam (Glance Fig 2) which reduces cost. Therefore it would have been obvious to a person of ordinary skill in the art at the time the invention was made to use the multi-reflection resonance cavity of Glance in place of the resonant cavities of Zhou because it would reduce cost.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Zhou et al 6690846, Glance 6292298, Paiam 6252716, Zhou et al 6243200, Zhou 6621632, Colbourne et al, Baker et al 6567174, Smith et al 2001/0013933 and Smith 6359693.
